IDENTIFY. SOLVE. RESTORE. MAINTAIN. GROW.

One Coordinated Partner *for the Hospitality Environment.*

Integrated architectural enhancement, commercial shade, acoustic comfort, artisanal furniture restoration, preventative maintenance, compliance standards, and digital hospitality systems.

PHASED & SCHEDULED EXECUTION • SANS 10400 & SANS 1850 STANDARDS ALIGNMENT • CONSOLIDATED GOVERNANCE SLA

— STRATEGIC INTRODUCTION

The Modern Hospitality Reality

Hospitality is not merely a dining room, a physical building, or an evening menu. It is the synchronized expression of architectural space, physical comfort, surface condition, acoustic intimacy, air hygiene, operational continuity, and digital relevance.

In premier hotels, high-volume restaurants, luxury safari lodges, and historic wine estates across Southern Africa, executive general managers and property owners face continuous operational pressure. A failing extraction unit, an uncomfortably reverberant dining room, faded timber tables, or an unshaded terrace directly impacts guest covers and bottom-line yield.

Historically, maintaining these multifaceted environments has forced operators to coordinate numerous independent contractors: furniture refinishers, umbrella installers, extraction cleaners, HVAC mechanics, compliance auditors, and digital agencies. Each works in isolation with disparate schedules and fragmented accountability.

The Single-Source Model

AfriSMME Hub replaces vendor fragmentation with a unified corporate ecosystem. We evaluate the property holistically, establish transparent capital priorities, and execute specialized multi-trade work during planned daytime maintenance windows and phased schedules.

REPRESENTATIVE VISUALISATION • FIVE-STAR OUTDOOR DINING

COMFORT + COMMERCIAL CONTINUITY

SERVICE-READY HANDOVER

CORE OPERATIONAL PRINCIPLE

“Coordinate work in disciplined daytime maintenance windows and phased workshop batches. Return every zone pristine, odour-free, and service-ready.”

— ENTERPRISE IDENTITY & MANDATE

An Integrated Infrastructure & Environment Partner

AfriSMME Hub is an integrated corporate hospitality support ecosystem engineered specifically for luxury restaurants, boutique hotels, safari lodges, wine estates, and commercial venue portfolios.

Our Distinction

AfriSMME Hub is not an informal repair service, furniture reseller, or middleman broker. We operate as a structured facilities engineering and physical environment management partner, providing institutional-grade coordination across every trade required to maintain hospitality venues.

Unified Multi-Trade Governance

We unite master wood craftsmen, architectural shade specialists, certified extraction technicians, acoustic joiners, and digital architects under a single master service level agreement (SLA):

- **Dedicated Account Management:** One senior technical director as single point of contact.
- **Specialist Regional Workshops:** Purpose-built timber, cane, and metal restoration facilities.
- **Scheduled Service Protocols:** Structured daytime maintenance windows and phased batch rotation.
- **Institutional Governance:** Consolidated invoicing, clear project scopes, and master warranties.

PHYSICAL BRANDING ASSET • BESPOKE ARCHITECTURAL METALWORK SANDTON CRAFT FACILITY

CORPORATE ACCOUNTABILITY

All site operations are backed by comprehensive commercial general liability insurance, Workmen's Compensation (COIDA), and strict alignment with SANS regulatory building and ventilation standards.

— THE COMMERCIAL PROBLEM

The Hidden Cost of Managing Multiple Disconnected Vendors

High-traffic hospitality venues endure heavy physical wear. Managing independent ad-hoc contractors leads to scheduling conflicts, divided accountability, variable quality standards, and avoidable trading disruptions.

CAPACITY LOSS

Weather-Exposed Terraces

Sudden coastal wind, solar glare, or passing showers frequently empty outdoor seating during peak lunch and dinner hours, directly compromising cover capacity.

GUEST COMFORT

Harsh Room Acoustics

Hard tiles, glass, and bare plaster create severe acoustic reverberation. Diners strain to hear conversation, leading to sensory fatigue and shortened dining sessions.

AESTHETIC WEAR

Deteriorated Table Surfaces

UV bleaching, moisture rings, and finish degradation detract from high-end presentation, diminishing perceived dining luxury and table turnover value.

CAPEX INEFFICIENCY

Premature Furniture Disposal

Operators often replace solid hardwood tables and cane armchairs prematurely due to a lack of skilled restorative artisans, incurring avoidable capital costs.

OPERATIONAL RISK

Kitchen Duct Inefficiency

Grease build-up in extraction systems chokes airflow, elevates fire risks under SANS 1850 codes, and invites disruptive kitchen failures during service.

DIGITAL DISCONNECT

Unoptimized Digital Menus

Clunky PDF menus, missing allergens, and unmanaged local search listings disconnect your physical dining room from guests searching online.

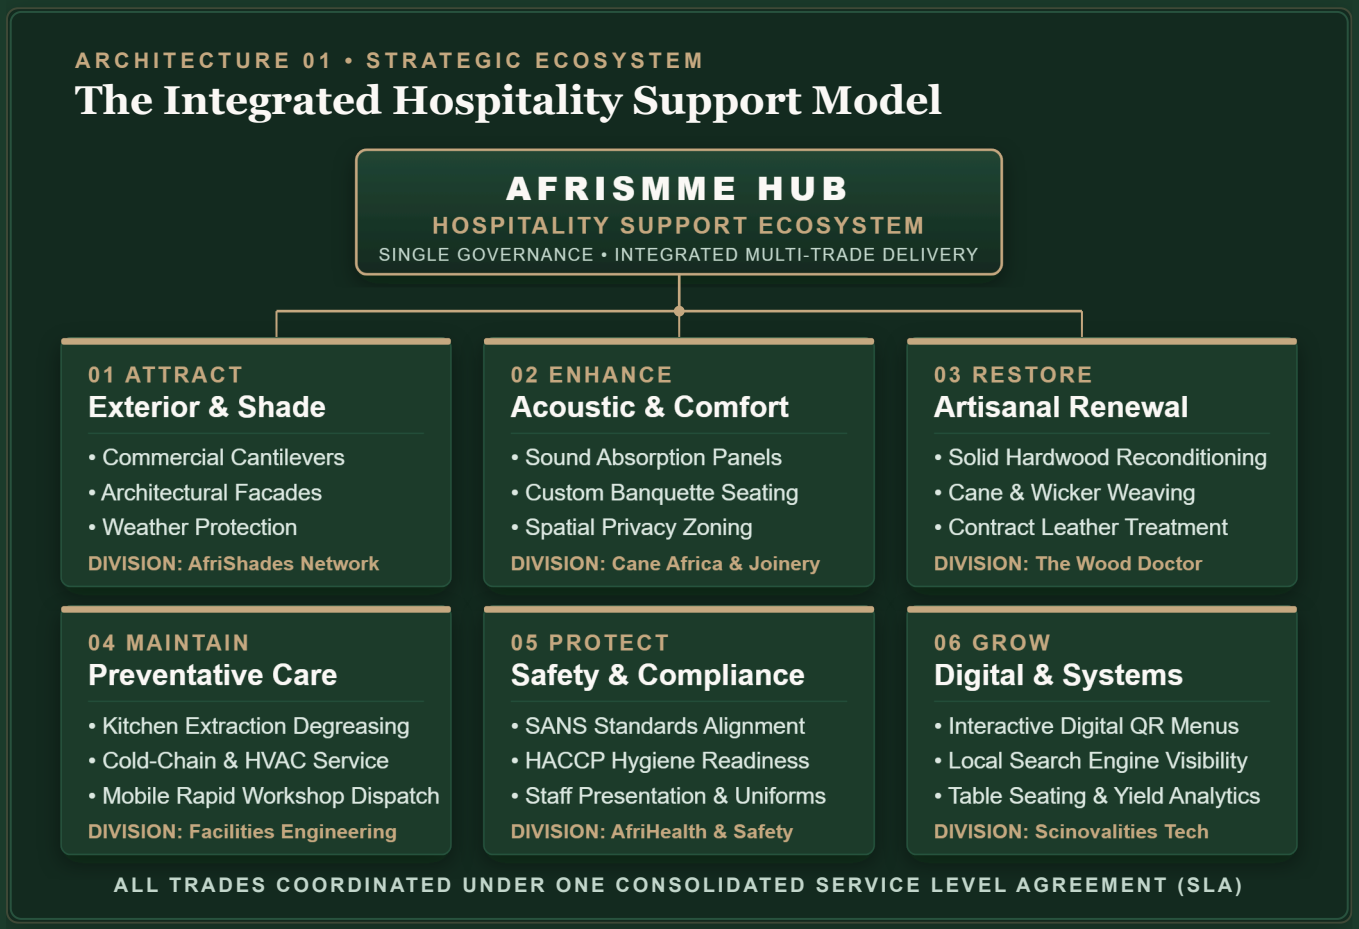

The Administrative Coordination Drain

General managers often spend valuable operational hours sourcing trades, negotiating quotes, and supervising repairs. AfriSMME Hub replaces multi-vendor friction with a coordinated, accountable facilities partnership.

— STRATEGIC BLUEPRINT

The Coordinated Hospitality Ecosystem

AfriSMME Hub functions as the central governance node, orchestrating specialized trade divisions through one synchronized operational pipeline.

Centralized Quality Assurance

Every artisan, technician, and installer operates under AfriSMME Hub's standardized quality protocols. Site supervisors oversee every scheduled intervention, conducting air quality and food-safety checks prior to handover.

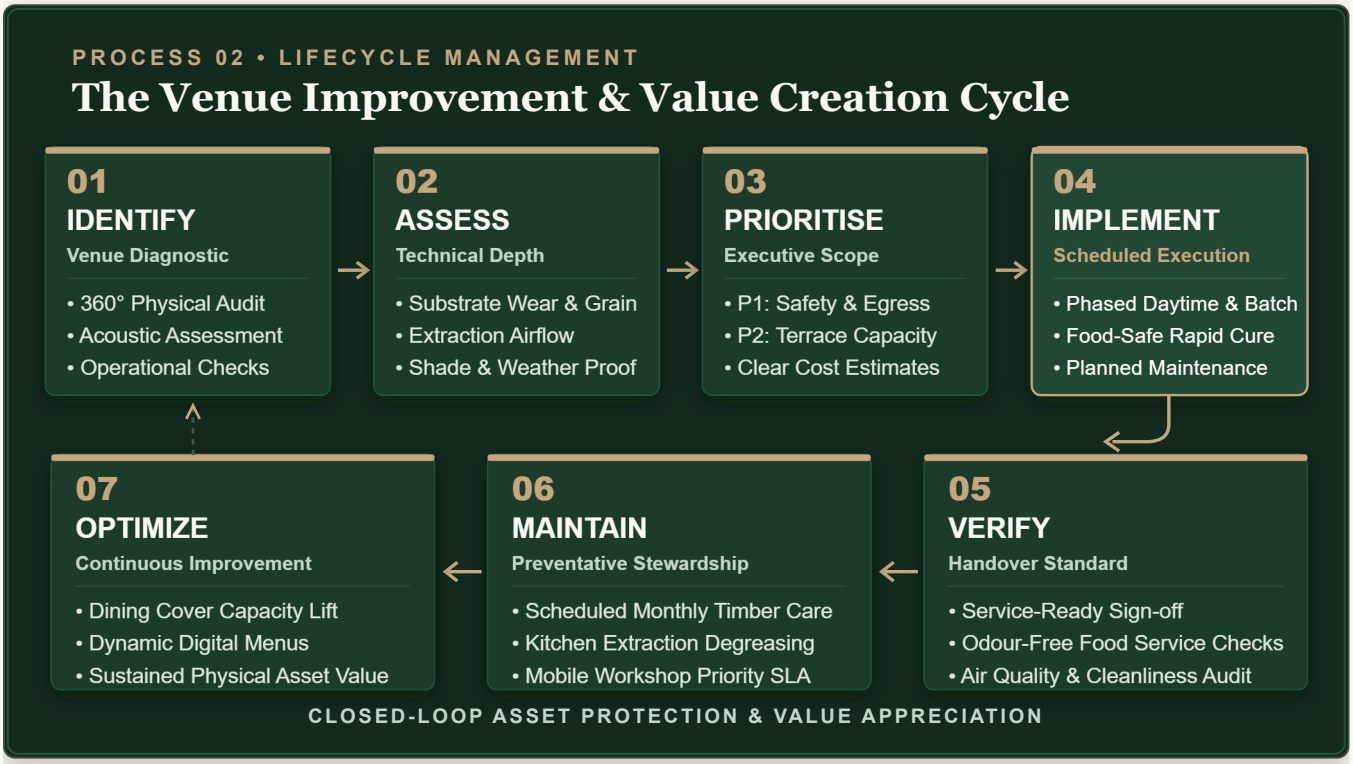

Single Commercial SLA

Venue groups interact with one contractual entity. Consolidated monthly billing, unified master warranties, and priority dispatch schedules eliminate multi-vendor friction entirely.

— OPERATIONAL METHODOLOGY

The Venue Improvement & Value Creation Cycle

Our structured consultative lifecycle provides clear diagnostic depth, executive cost roadmaps, disciplined phased execution, and continuous preventative care.

Phased Governance & Handover Standards

From initial 360° diagnostic audit to scheduled daytime maintenance and phased workshop restoration, every milestone is verified with duty managers. Work areas are vacuum-scrubbed, surfaces cured with non-toxic oils, and air exchanges verified for odour-free service.

Continuous Value & Preventative Care

Interventions do not end at installation. Scheduled monthly timber re-nourishment, kitchen extraction maintenance, and digital menu engineering maintain asset longevity and optimize dining cover yields continuously.

— STRATEGIC CONVERGENCE

Physical, Operational & Digital Continuum

The physical venue, back-of-house operations, compliance standards, and digital touchpoints are deeply interdependent. AfriSMME Hub connects all four dimensions into a unified ecosystem.

The Guest Journey Continuity

A guest's experience begins with digital discovery on an AI-optimized search profile, continues onto a weather-protected shaded terrace, settles into an acoustically comfortable dining booth, and concludes with seamless digital payment. Harmony across touchpoints preserves brand prestige.

The Operational Backing

Front-of-house luxury cannot survive without back-of-house discipline. Polished tables and comfortable booths are supported by clean kitchen extraction ducts, compliant gas systems, hygienic food preparation standards, and professional staff uniforms.

— PILLAR 01 — FIRST IMPRESSIONS & EXTERIOR

AFRISHADES NETWORK

ATTRACT: Exterior, Shade & Weather Architecture

Convert exposed outdoor areas into high-yielding, weather-protected dining destinations while establishing commanding architectural curb presence.

The Commercial Problem

Outdoor terraces represent up to 45% of peak seating capacity, yet operators frequently lose this revenue during harsh afternoon sun, sudden rain, or blustery winds. Residential-grade umbrellas fail under commercial hospitality use, creating safety liabilities and frequent replacement expenses.

Our Solutions

- **AfriShades Commercial Cantilevers:** Wind-rated aluminium masts, marine-grade 316 stainless rigging, and reinforced ballast bases.
- **Architectural Facade Signage:** Precision-milled brass, patinated bronze, and edge-lit LED lettering.
- **All-Weather Retractable Windbreaks:** Motorized drop blinds and glass balustrade extensions.
- **Atmospheric Exterior Lighting:** Warm 2700K glare-free architectural fixtures for evening ambiance.

MEASURABLE BUSINESS OUTCOME

Significantly expands usable outdoor dining capacity across changing weather conditions, protecting valuable table covers and terrace revenue.

AUTHENTIC AFRISHADES COMMERCIAL CANTILEVER SYSTEM

HEAVY-DUTY ALUMINIUM MAST • GRADE 316 RIGGING

ENGINEERING SPECIFICATION

High-performance solution-dyed acrylic canopies (UPF 50+), fluorocarbon water-repellent coating, and high-tensile extruded alloy structural frames engineered for South African coastal and highveld conditions.

— PILLAR 02 — ACOUSTICS & INTERIOR COMFORT

INTERIOR COMFORT

ENHANCE: Acoustics, Banquettes & Guest Dwell Time

Engineer acoustic calm, ergonomic seating intimacy, and atmospheric zoning that lengthens table dwell time and elevates beverage spend.

The Commercial Problem

Modern dining spaces featuring concrete floors, glass facades, and bare plaster often suffer from severe acoustic reverberation. Guests strain to hold conversations, leading to vocal fatigue, hurried meals, and decreased after-dinner beverage orders.

Our Solutions

- **Concealed Acoustic Absorption:** High-NRC sound-absorbing cores discreetly integrated behind timber battens, upholstered panels, and artwork.
- **Custom Contract Banquettes:** Deep ergonomic fluted booths upholstered in contract-grade stain-resistant leather and velvet.
- **Spatial Privacy Zoning:** Architectural room dividers and acoustic planters that create sought-after intimate dining enclaves.
- **Circadian Lighting Schemes:** Warm dimming fixtures tailored for dinner service intimacy.

MEASURABLE BUSINESS OUTCOME

Substantially dampens ambient dining room reverberation, creating a relaxed acoustic atmosphere that encourages extended guest dwell time.

DOCUMENTED FIELD ASSET • ACOUSTIC BANQUETTE BOOTH • TIMBER BATTEN INTEGRATION • NRC SOUND REDUCTION

ACOUSTIC PERFORMANCE METRIC

Target reverberation time (RT60) engineered toward 0.7–0.9 seconds—the recognized international acoustic benchmark for fine dining conversation and intimacy.

— PILLAR 03 — ARTISANAL RESTORATION

THE WOOD DOCTOR

RESTORE: Furniture, Timber, Cane & Fine Finishes

Renew premium solid wood tables, cane armchairs, and leather banquettes in scheduled batches and planned maintenance windows with food-safe curing.

The Commercial Problem

High guest turnover, hot dishes, alcohol spills, and cleaning chemicals rapidly degrade tabletop varnishes, causing scratches, rings, and chipped edges. Replacing commercial hardwood furniture requires significant capital expenditure and lengthy lead times.

Our Solutions

- **Phased Timber Refinishing:** Deep grain sanding, stain removal, and application of natural hardwax oils during scheduled maintenance windows or off-site workshop batches.
- **Zero-VOC Food-Safe Oils:** Rapid-curing, non-toxic finishes with zero persistent chemical odours before guest service.
- **Artisanal Cane & Wicker Weaving:** Structural re-weaving of damaged rattan armchairs by master craftsmen.
- **Leather Revival & Re-dyeing:** Deep pore conditioning, pigment revival, and protective spill-guard sealants.

MEASURABLE BUSINESS OUTCOME

Delivers substantial capital expenditure savings relative to replacement, executed in coordinated batches to protect your trading capacity.

REPRESENTATIVE VISUALISATION •HAND-RUBBED TEAK MASTER ARTISAN TIMBER WORKSHOPRESTORATION • ZERO-VOC CURE

FOOD-SAFE SURFACE STANDARDS

Finishes comply with international food contact standards (EN 71-3). Natural plant-based oils cure rapidly to ensure odour-free dining tables ready for guest service.

— PILLAR 04 — PREVENTATIVE CARE & FACILITIES

TECHNICAL FLEET

MAINTAIN: Preventative Care & Rapid Fleet Logistics

Protect critical kitchen equipment, commercial ventilation, and cold storage with scheduled preventative audits and priority mobile response.

The Commercial Problem

Emergency breakdowns in commercial extraction hoods, under-counter refrigeration, or electrical circuits occur most often under peak weekend service loads. Reactive emergency call-outs incur steep after-hours fees and risk disastrous service halts.

Our Solutions

- **Scheduled Preventative Inspections:** Monthly diagnostic service of hood extraction fans, grease filters, and refrigeration condenser coils.
- **Mobile Rapid Workshops:** Fully equipped support vans stocked with critical spares for contract clients.
- **Cold-Chain Refrigeration Auditing:** Temperature calibration, door gasket replacements, and digital telemetry checks.
- **Preventative Mechanical Logs:** Comprehensive servicing documentation required for insurance and health inspection compliance.

MEASURABLE BUSINESS OUTCOME

Substantially mitigates costly emergency breakdowns through structured preventative maintenance, extending the operating life of kitchen assets.

CAPE TOWN & GAUTENG SERVICE CORRIDORS • PRIORITY DISPATCH

FLEET DEPLOYMENT STANDARDS

Fully stocked mobile engineering units operating across Gauteng, Western Cape, and KwaZulu-Natal, staffed with certified gas, electrical, and extraction specialists.

— PILLAR 05 — SAFETY & OPERATIONAL SHIELD

AFRIHEALTH & SAFETY

PROTECT: Safety, Compliance & Operational Assurance

Shield the venue from municipal compliance stoppages, insurance repudiation, and hygiene risks through rigorous statutory audits and presentation standards.

The Commercial Problem

Municipal environmental health inspectors, Department of Labour OHS auditors, and insurance underwriters enforce exacting standards. Uncertified duct cleaning, missing fire suppression logs, cross-contamination risks, or disheveled staff uniforms expose venues to severe reputational and legal risks.

Our Solutions

- **SANS 10400 & SANS 1850 Alignment:** Extraction duct fire safety checks, automatic gas shut-off verifications, and compliance records.
- **HACCP Food Safety Protocols:** Deep kitchen hygiene audits, cross-contamination zoning, and temperature register compliance.
- **Emergency Egress & Equipment Verification:** Fire extinguisher inspections, illuminated exit signage, and first aid compliance.
- **Staff Presentation & Uniforms:** Contract-grade front-of-house and culinary apparel with tailored embroidered brand crests.

MEASURABLE BUSINESS OUTCOME

Maintains proactive inspection readiness, prevents municipal non-compliance notices, and ensures alignment with insurance risk requirements.

REPRESENTATIVE VISUALISATIONGAS ISOLATION • VENTILATION COMPLIANCE • HACCP LOGS • EXECUTIVE KITCHEN SAFETY AUDIT

REGULATORY FRAMEWORK COVERAGE

Comprehensive statutory coverage aligning with the Occupational Health & Safety Act (Act 85 of 1993), SANS 1850 commercial kitchen ventilation, and R638 food hygiene regulations.

— PILLAR 06 — TECHNOLOGY & COMMERCIAL LIFT

SCINOVALITIES TECH

GROW: Digital Systems, AI, Menus & Capacity Yield

Maximize seating revenue through floorplan yield modeling, interactive digital menus, AI guest communications, and dominant local search presence.

The Commercial Problem

Many high-end venues leave significant revenue unrealized due to static table configurations, cumbersome PDF menu downloads, unmanaged Google Maps listings, and delayed responses to group reservation inquiries.

Our Solutions (via Scinovalities)

- **Interactive Smart QR Menus:** Fast, app-free digital menus featuring high-resolution visuals, allergen filters, and wine pairing notes.
- **Floorplan Yield Modeling:** Data-informed reconfiguration of 2-top and 4-top tables to increase seat density without crowding.
- **AI Guest Concierge:** Automated inquiry management for group bookings, private dining, and dietary requirements.
- **Local SEO & AEO Optimization:** Elevate mobile search ranking and map discovery for luxury dining in your catchment.

MEASURABLE BUSINESS OUTCOME

Enhances average guest order value through visual menu merchandising, wine pairing recommendations, and optimized table turnover during peak services.

REPRESENTATIVE VISUALISATION • SCINOVALITIES DIGITAL HOSPITALITY TELEMETRY PLATFORM • CAPACITY TURNOVER

DIGITAL PERFORMANCE BENCHMARK

Rapid sub-second mobile page delivery, direct Dineplan and OpenTable integration, and structured review management pipelines.

— SCINOVALITIES PARTNERSHIP

Digital Hospitality: Physical & Digital Unity

The physical dining room and your digital presence must tell the same story. In partnership with Scinovalities, we engineer end-to-end digital touchpoints that mirror your physical venue's excellence.

Next-Gen Guest Discovery

Dining choices are frequently made on mobile devices within seconds. We implement Answer Engine Optimisation (AEO) and structured Schema markup, ensuring your venue ranks prominently on Google Maps, Apple Maps, and AI assistant searches.

Dynamic Digital Menus

Eliminate dated, illegible PDF downloads. Our bespoke responsive digital menus feature instant currency options, dynamic sommelier wine pairings, daily chef specials, and allergen filters, supporting higher beverage and dessert conversion.

AI Guest Inquiries & Functions

Streamline group booking and event inquiries via intelligent WhatsApp and website concierges that answer complex menu questions, check function room availability, and route qualified leads directly to your events team.

Reputation Telemetry

Real-time monitoring of Google Reviews, TripAdvisor, and social mentions. AI-assisted sentiment analysis alerts management promptly to emerging food, noise, or service friction points before they impact brand reputation.

— TAILORED MARKET APPLICATIONS

Serving Premier Hospitality Sectors

Every hospitality sector faces distinct operational friction points. We tailor our six support pillars to address the specific commercial requirements of each venue category.

Fine Dining & Bistros

Challenges: Dining acoustic reverberation, wine-stained tables, and short dinner dwell times.

Interventions: NRC sound absorption panels, phased table refinishing, and intimate banquette zoning.

Hotels & Beach Resorts

Challenges: Heavy traffic from breakfast to dinner, UV sun bleaching on pool loungers, and wind damage.

Interventions: Heavy-duty AfriShades cantilevers, synthetic wicker repair, and scheduled preventative care.

Safari Lodges & Camps

Challenges: Intense bush sun exposure, weathered ironwood decks, and remote supply logistics.

Interventions: Heavy timber oil nourishment, canvas pavilion maintenance, and batch workshop collections.

Historic Wine Estates

Challenges: Expansive garden patios vulnerable to winds, heritage joinery preservation.

Interventions: Wind-rated parasols, architectural brass signage, and heritage wood restoration.

Cocktail Bars & Lounges

Challenges: Heavy bar top scuffing, worn leather stools, and chaotic entrance flow.

Interventions: Bar top solid surface polishing, deep leather revival, and dimmable accent lighting.

Multi-Site Groups

Challenges: Inconsistent standards between locations, duplicated contractor invoices.

Interventions: Standardized group SLA, priority fleet routing, and centralized executive billing.

REPRESENTATIVE VISUALISATION • HISTORIC WINE ESTATE FRANSCHHOEK, WESTERN CAPE • COMPREHENSIVE OUTDOOR TERRACE RESTORATION

— THE PHASED OPERATING PRINCIPLE

Minimal Service Disruption: Phased Daytime & Workshop Runbook

The hospitality business cannot afford unplanned closures for maintenance. Every uncoordinated shutdown disrupts revenue and inconveniences guests.

The Phased & Scheduled Execution Protocol

STAGE 01 — Zonal Isolation & Floor Protection
Our crew arrives during agreed daytime maintenance windows. Floor protection and dust containment barriers are established around the designated zone.

STAGE 02 — Dustless Sanding & Mechanical Servicing
Commercial HEPA-filtered sanders strip damaged finishes, or furniture batches are collected for our Kew, Sandton workshop.

STAGE 03 — Food-Safe Hand-Rubbed Oil Application
Master craftsmen apply rapid-cure natural hardwax oils to table surfaces and bar tops. Leather nourishment applied.

STAGE 04 — Curing & Ventilation Verification
Fresh-air exchange verified; zero volatile organic compounds or chemical odours remain in dining zones.

STAGE 05 — Ready-for-Service Sign-Off
Final quality inspection signed off with the duty manager. Zone is spotless and ready for guest seating.

Service-Ready Handover Commitment

Structured operational runbooks, dedicated site supervisors, and formal handover protocols ensure every venue zone is returned spotless, cured, and service-ready on schedule.

DUSTLESS HEPA STANDARDS
Sealed vacuum extraction with industrial HEPA filtration safeguards dining tables, linens, and glassware from airborne timber dust.

0	100%
CHEMICAL ODOUR	SERVICE READY

Scheduled Service Dispatch: Preventative maintenance and batch collections operate across Johannesburg, Pretoria, Cape Town, and Durban during planned daytime windows.

— ENTERPRISE GOVERNANCE

The One Coordinated Partner Governance Model

Eliminate inter-vendor friction, administrative overhead, and fragmented accountability. AfriSMME Hub serves as the unified commercial and operational partner for the entire hospitality environment.

Traditional Disconnected Model

- Multiple separate contractor quotes, contracts, and credit applications.
- Divided accountability and inter-trade conflict during overlapping scopes.
- Unplanned daytime service shutdowns and disruptive revenue losses.
- Disproportionate executive management hours drained by trade supervision.
- Fragmented warranties, disputed liabilities, and lack of central recourse.

AfriSMME Hub Coordinated Model

- **Consolidated Master Service Agreement (SLA)** across all trades.
- Dedicated Technical Account Director managing end-to-end deliverables.
- Planned daytime maintenance windows and phased batch rotation preserving trading.
- Management bandwidth protected to focus entirely on guest hospitality.
- Coordinated master warranty with single-source contractual accountability.

— DIAGNOSTIC AUDIT PROTOCOL

The 10-Point Hospitality Venue Assessment Model

Before recommending any intervention, our engineers conduct an objective diagnostic audit across ten critical dimensions of your hospitality operation.

01. Physical Environment: Floor finishes, wall condition, architectural lighting, entrance ambiance.

02. Guest Experience: Acoustic reverberation, seating ergonomics, table spacing, dining comfort.

03. Outdoor Spaces: Terrace shading, wind protection, parasol stability, all-weather capacity.

04. Furniture & Finishes: Tabletop lacquer wear, cane weave integrity, leather hydration.

05. Preventative Care: Extraction ducts, refrigeration coils, electrical distribution boards.

06. Safety & Compliance: SANS 10400 fire egress, gas isolation valves, hygiene HACCP logs.

07. Digital Presence: Website performance, interactive QR menus, Google local search ranking.

08. Technology & AI: Automated booking workflows, table turnaround analytics, reputation alerts.

09. Operational Continuity: Service flow choke points, waitstation layouts, dirty dish return routes.

10. Growth Drivers: Terrace optimization, table yield configuration, average spend drivers.

THE 4-TIER PRIORITISATION OUTPUT

PRIORITY 1
Critical
Fire risks, gas leaks, health hazards, emergency downtime.

PRIORITY 2
High Impact
Terrace shade capacity, dining room acoustics, table count lift.

PRIORITY 3
Improvement
Furniture refinishing, booth reupholstery, brass polishing.

PRIORITY 4
Optimization
AI booking automation, QR menus, predictive telemetry.

— STRATEGIC VALUE MATRIX

The Executive Service & Outcome Matrix

Translating technical engineering and craftsmanship interventions into bottom-line commercial outcomes.

VENUE AREA	OPERATIONAL CHALLENGE	AFRISMME INTERVENTION	COMMERCIAL OUTCOME
Outdoor Terraces	Wind, solar glare, rain leaving tables empty	Heavy-duty cantilevers, windbreaks, heaters	**Substantial terrace cover expansion**
Dining Tables	Scratched lacquer, wine stains, heat rings	Phased zero-VOC food-safe hardwax oil	**Significant CapEx savings vs purchasing new**
Acoustic Space	Harsh reverberation, shouting diners	Discrete acoustic timber panels (NRC > 0.85)	**Enhanced acoustic comfort; lengthened dwell**
Seating Booths	Collapsed foam, worn leather, sagging	CMHR high-density foam & contract leather	**Increased table dwell & premium pricing**
Cane Furniture	Snapped weave, structural instability	Artisanal hand re-weaving & frame weld	**Eliminates import replacement delays**
Kitchen Hoods	Grease build-up, smoke hazard, fire risk	SANS 1850 scheduled degreasing & balancing	**Statutory fire safety & insurance alignment**
Cold Storage	Compressor strain, spoiled perishables	Preventative coil cleaning & gasket renewal	**Prevents costly food spoilage & shutdowns**
Digital Menus	Illegible PDFs, static unchangeable prices	Fast interactive mobile QR menu platform	**Higher conversion on pairings & specials**
Compliance	Environmental health inspection risks	HACCP & municipal inspection readiness	**Audit readiness & operational risk reduction**

Executive Bottom Line: Managing your hospitality infrastructure through AfriSMME Hub preserves capital, protects venue asset valuation, and ensures your management team focuses entirely on the guest experience.

— OPERATIONAL REACH

National Footprint & Workshop Facilities

Supported by centralized artisan workshops and rapid-response mobile units across South Africa's key hospitality hubs.

Central Workshop Facilities

Our central manufacturing and restoration facility is located in Kew, Sandton. Spanning extensive joinery, metal fabrication, and upholstery studios, our workshop handles large-scale batch refurbishments for hotel groups and restaurant chains.

- **Joinery & Timber Lab:** Climate-controlled oil curing and dust extraction.
- **Cane Weaving Atelier:** Dedicated hand-weaving frames for natural and synthetic rattan.
- **Textile Studio:** Industrial leather stitching and foam fabrication.
- **Metal Engineering:** TIG/MIG welding for parasol masts and signage frames.

Regional Operating Corridors
